

Sergio Torres

SUMMARY

Experienced software developer working in teams and on solo projects. Uniquely interested in the relationship between hands-on engineering and coding. As a naturally curious developer, I value constructive criticism and feedback that I readily integrate into my work to meet project outcomes and surpass expectations. Seeking a Software Development position where I can use my programming skills to support the mission and goals of my employers.

TECHNICAL SKILLS

Languages: C#, C++. HTML, CSS, Javascript, Python, React, NodeJS, APIs, Bootstrap, PostgreSQL, Sequelize

Tools: Unity, Visual Studio, Visual Studio Code, PyCharm, Raspberry Pi Development, Maya, Blender, GitHub Version Control, Microsoft Teams, Slack, Insomnia, Git Bash, CircleCI, Apollo GraphQL, PostgreSQL, TypeScript

EDUCATION

Certificate of Completion Coding Bootcamp - University of Central Florida (UCF)
Orlando, FL - 06/2024 - 11/2024

Bachelor of Science in Computer Science - Florida Polytechnic University
Lakeland, FL - 08/2016 - 05/2021

PROFESSIONAL EXPERIENCE

Fullstack Developer - Freelance - [Autoshops.com](https://www.autoshops.com)

01/2026 - Current

- Joined a small startup development team to assist with building and improving frontend and backend code structure
- Primarily responsible for frontend development code implementing new features to make the user experience more fluid and worry free
- Expanded my Fullstack knowledge by contributing to backend logic such as implementing new api routes, implementing date-based status checks and using API's to request and display data

Software Developer - Helpertunity, Apopka, FL - [Chalkboard Link](#)

08/2021 - 02/2023

- Collaborated with the executive director to define site and app requirements, including setting metrics for quality and accessibility. Regularly reported progress to ensure the program met their standards and aligned with organizational goals.
- Developed three educational web applications—each with a unique style and purpose—centered around enabling users to create and share digital sketches. Built with HTML, CSS, JavaScript, and jQuery, these tools are currently hosted on the company's website for internal use and future classroom integration.

I.T./Software Developer - Learning Resource Center of Polk County, Lakeland, FL

01/2021 - 06/2021

- Independently managed the company's WordPress site, identified performance and usability issues, and implemented improvements to enhance the user experience.
- Took initiative to research and apply cost-effective server management strategies, which reduced overhead and maintained site reliability.
- Communicated technical concepts in clear, simple terms to support non-technical team members.

Software Engineer - Software Engineer JW & Associates, Lakeland, Florida

08/2020 - 03/2021

- Collaborated with three specialized teams—coding, robot design, and electrical design—to align efforts toward a unified project goal and ensure the successful creation of a cohesive, fully functional robot.
- Led the coding group to ensure the robot successfully differentiated between dirty and clean surfaces
- Using a Raspberry Pi mini-computer, created a program that identified dirty surfaces using a camera. This tool was created with OpenCV for computer vision and code written in PyCharm.

PROJECTS

YuGiOh Collection/Deck Builder -

https://github.com/SirrBarnes/Yu-Gi-Oh_Deck_Builder

- This web app can help users with deck creation and card management. They can search for cards and decide whether to add them to an existing deck or create a new one. Users can also create a profile and update their avatar and bio
- Technology Used: HTML, CSS, JavaScript, React, APIs, Bootstrap, ESLint, NodeJS, JWTs, YGPRO API, Ant Design, GraphQL, MongoDB
- Led front-end development with a focus on mobile-first responsiveness, while collaborating with teammates to maintain a cohesive and user-friendly interface.
- Designed and implemented the full login/logout flow, handling both front-end components and back-end authentication logic.

- Developed the user profile system, enabling users to update their bio and profile picture, and integrated custom background images provided by teammates to enhance personalization.
- Built a searchable card display with an input field for dynamic filtering, improving user interaction and accessibility.
- Provided consistent support with back-end debugging, stepping in whenever teammates encountered challenges, and regularly gathered feedback to ensure team satisfaction and alignment.

NeetPlan - <https://github.com/SirrBarnes/NeetPlan>

- This web app can help users organize their daily plans by allowing them to create, edit, and manage tasks throughout the day. Users can also view current weather information to help plan their activities accordingly. The app is designed with scalability in mind, making room for additional features that further support life organization and productivity.
- Technology Used: HTML, CSS, JavaScript, React, PostgreSQL, APIs, Bootstrap, Sequelize, NodeJS, JWTs, openweatherAPI, API Ninja
- Worked on the settings and about pages, as well as login/logout functionality, managing both front-end styling and back-end routes to support user customization, authentication, and smooth transitions throughout the application.
